Log sheet

Fill one row per photo. 1 repeat per star (supervisor's call). Just follow the rows top to bottom. Leave Force empty on `ref` rows (nothing touching).

Session

Field	Value
Date	
Skin ID	
Room temperature at start (°C)	
Room temperature at end (°C)	
Warm-up time before first photo (min)	
Stripe period → px/mm (last: 11.8 at 768 px)	
Camera: exposure / WB / focus	
Touch threshold used (N)	0.05

Check presses (flat Ø10 mm, centre, 1 mm)

Do 3 at the start, then one after row 28 and one at the end. More than ~5–10% away from the start values → stop and check.

When	Force (N)	Max phase	OK?
Start 1			
Start 2			
Start 3			
After row 28			
End			

Part 1 — Main data (0°, 0.5 → 3.0 mm, 1 repeat)

Rows 29–35: S1 pressed a second time at the end, only to see how much the same star varies.

Part 2 — Orientation check (45° and 90°, 3.0 mm only)

Rotate only the star, around the same centre. Go straight to 2.0 mm, no intermediate steps.

#	Star	Angle (°)	Depth (mm)	File name	Force (N)	Notes
